Data Hiding - This is part of of the encapsulation that restricts direct access to the behind and
internal state of object.For user no need to know what's going on behind side the system.
methods: private() and other

Encapsulation - This is a combination of data(variables)andmethods(functions) thatworkwiththisdataintoone"container"orclass.so that code be is structures.
We pack everything rekated to one object into class

Abstraction - This is highligtingonly the importants characteristics of an object and hiding the
implementation details.
